The Alberta Research Council's Publications office has more than 3,000 research publications – some dating back to 1921! It is also the soils information centre for the province.

The office features research information compiled by some of the Alberta Research Council's most accomplished scientists. A variety of information on a wide range of scientific research is available, including; coal, oil sands, energy, environment, geology, information services, life sciences, material sciences and physical sciences.

■ **Using the publications list**

Publications are listed first under category headings, followed by a series number. To locate a specific item, you should first determine the category to which the publication belongs and then the specific item number (for instance, Atmospheric Sciences Report 75-2).

The following descriptions of the various series should help you identify the category to which a publication belongs:

Alberta Soil Survey Reports

- reports and maps of soils in select areas of Alberta
- first published in 1988
- numbered sequentially

Atmospheric Sciences Reports

- reports primarily of the Alberta Hail Project
- published since 1970
- numbered sequentially

Bulletin

- major, substantive reports
- generally a comprehensive publication on an area or a topic
- published since 1958
- numbered sequentially

Coal Reports

- reports describing coal processing research and characteristics of Alberta coal deposits
- published since 1984
- numbered by year number (e.g., 84-2)

Earth Sciences Notes

- preliminary typescript reports, less substantive than Earth Sciences Reports
- three reports prepared between 1977 and 1980
- numbered by year-letter (e.g., 81-A)

Earth Sciences Reports

- reports on geology, coal geology, soil surveys and hydrogeology
- generally restricted to a map area or limited to a specific aspect of a broader topic
- published since 1955
- numbered sequentially
